Playlists and global lists. 7.

Keyboard macros, websites, custom shortcuts, mouse movement, repetition. 8. Create a list of websites, e-mail, keyboard, mouse movement. 9. Create a personal log and easy access. 10. Access to your Mac and PC via Browser. KeyMacro is a keyboard/mouse monitoring and recoding software. It features a powerful and easy-to-use user interface, which helps you to record your keyboard's keystrokes and mouse movements without the need for any prior knowledge of programming. You can make a list of websites you've visited, record your website movements, create a login history, add your name to a log, and view a

DiskCheck

What's New in the DiskCheck?

DiskCheck is a simple diagnosis tool that you can use to view a list of all the hard disks and portable storage devices your computer is equipped with and get information about their performance. Extracts information about your storage devices Upon launch, DiskCheck prompts you to choose whether to launch the application directly or install it as a self-booting application and create a bootable medium. The standalone application can be started the easiest to take it for a spin. Once started, DiskCheck initiates a scan of the entire system to detect the available hard disks and the portable storage devices connected to the machine via USB. For each entry, you get to see hardware-related details, such as the controller, the channel device, the manufacturer, the product name and its serial number, as well as the firmware version. If you connect a new device to the computer, you can choose to refresh the drive list with the click of a button. An integrated speed tester and a hex viewer But DiskCheck is not just an application that retrieves information about the storage hardware. It also comes with an integrated speed tester, a handy tool that can assess the performance of a hard disk or a portable device. It evaluates the reading speed of the selected storage medium at the start and at the end, as well as the cache reading speed, all in KB/s. Aside from system information extraction and speed testing, DiskCheck also features a hex viewer, displaying the contents of the selected hard drive or portable device in hexadecimal. A disk checking utility with speed testing tools DiskCheck is a simple piece of software, ready to gather data about IDE devices, with support for SCSI hard disks as well. It makes it possible for you to evaluate the reading speed of your hard disk. While it does display relevant information about your computer's storage devices, it does not cover as many details as its concurrent apps. Furthermore, a redesign of the interface is highly needed. My review Reviewer William Martin Date Reviewed September 28, 2011 Worth the price I love the functionality of this program and how well it functions. The user interface is laid out in a much more logical way than I have seen in most programs of this nature. I would recommend this program to anyone. What I like: What I dislike: I was a bit concerned when I bought this program because I had read reviews that the program was a bit hit and miss. Well, my fears were for naught! This program never misses anything! I do have a few suggestions for this program: First, I think that the program should have a setting to change what directory it looks in when searching for information about the hardware. This allows me to set my program to "Auto-Detect" and have it tell me when I find a new hard drive or USB stick and then the program

System Requirements:

Intel® Core™ 2 Duo CPU (or AMD Athlon™ 64 x 2) 2 GB of RAM (4 GB recommended) 2 GB of hard disk space NVIDIA® GeForce® 8600 or ATI Radeon™ X1600 Graphics Card or better Mouse Direct X: 9.0c Keyboard English and Chinese versions (localization) Additional Requirements: If you have Steam installed already: Download and install Steam to your hard drive. Make sure to launch Steam before running this game.
